Hi Ron,

PSNH began installation of a VCE and crystallizer system at Merrimack Station in 2011. Various components began operating across a number of months. The primary treatment system (physical/chemical) began operating in September 2011; the first stage of the secondary system (evaporator) began operations in March 2012; and the second stage (crystallizer) of the secondary system commenced operations in June 2012. Therefore, Merrimack Station has been operating the completed system since June 2012.

Hi Sharon,

Do you know when PSNH installed (or perhaps began operating) the evaporator at Merrimack?
